

ABSTRACT OF THE DISCLOSURE

The present invention provides an isolated mammalian histamine receptor, isolated or recombinant nucleic acids and recombinant vectors encoding the same, host  
5 cells comprising the nucleic acids and vectors, and methods of making the receptor using the host cells. This invention further provides antibodies and antigen binding fragments thereof which specifically bind to the receptor and are useful for treating medical conditions caused or mediated by histamine. Also provided are screening methods for identifying specific agonists and antagonists of the mammalian histamine receptor.
